SUMMARY

Backend-focused engineer with close to six years shipping production software, the last two as sole or lead developer on two live platforms. Owns systems end to end: PostgreSQL data modelling, JWT-secured REST APIs, Redis queues, payment and subscription workflows, and role and permission based access, through testing, CI/CD and AWS.

EXPERIENCE

CAAPID Simplified | *Ed-tech Startup*

Lead Developer

Remote

Aug 2024 – Present

- Lead the tech team across a suite of Laravel products serving internationally trained dentists applying to US dental programs (CAAPID and ADEA PASS), spanning a course and LMS platform, a mock test engine, application document writing services, and coach booking.
- Work across several projects at once, coordinating a cross-functional group of developers, designers, and coaching and content staff, and translating what the business needs into scoped technical work.
- Own the commerce stack end to end: Stripe through Laravel Cashier with subscriptions and EMI plans, cart and bundle rules, public and targeted coupons, and per-page and per-specialty service pricing.
- Integrated Google Workspace across coaching delivery, auto-provisioning Google Chat spaces on qualifying purchases, Drive uploads, Sheets exports, and coach scheduling against the Google Calendar and Calendly APIs.
- Ship Filament admin panels with role and permission based access and Spatie MediaLibrary media handling, and drove the SEO and performance work covering sitemaps, meta descriptions, and self-hosted fonts.
- Leading a rewrite of the customer-facing application on Laravel 12 with Inertia, React, and TypeScript.

Hotelo App | *Adidhi Hospitality Solutions Pvt Ltd*

Lead Back-end Developer, Shareholder

Remote

Sept 2024 – Present

- Sole back-end developer for a hospitality job platform connecting hotels and restaurants with job seekers, now past **50,000 registrations** across iOS and Android. Designed and built the entire back-end from scratch: a versioned REST API with JWT auth serving the mobile apps, and a Filament admin console with role and permission based access for internal operations.
- Built the employer-side candidate search: around twenty filter dimensions ranked by a weighted relevance score computed in SQL, combining PostGIS distance decay, position and experience fit, availability, and profile recency. Scores are banded and ties broken by a deterministic per-employer shuffle, so comparable candidates share exposure instead of one fixed platform-wide ordering.
- Runs on Laravel and PHP with PostgreSQL + PostGIS for location-based job search, Redis and Horizon for queued workloads, S3 with pre-signed direct uploads and CloudFront for media delivery, and Firebase Cloud Messaging for push notifications. Covered by Pest tests and deployed through Laravel Forge.
- As a shareholder, help set company strategy and build the investor pitch decks.
- Contribute beyond engineering, assisting in hiring, naming the product “Hotelo”, and defining the design language of the app.
- Built and maintain the company marketing website with Next.js, Tailwind CSS, and GSAP, including SEO and analytics setup.

Admire Creations

Technical Lead, Co-founder

Ernakulam, Kerala, India

Nov 2022 – Present

- Co-founded the studio and set its direction, reading the market as it stands, assigning and managing projects, and pursuing growth opportunities for the company.
- Deliver client work with React.js, WordPress, Figma, headless CMS platforms, and a range of deployment targets.

Indic Law | *Startup*

Project Manager

Ernakulam, Kerala, India

Aug 2022 – Sept 2022

- Managed a joint tech team building an edu tech platform for both mobile and web.
- Administered the company AWS account and GitHub organisation workspace.
- Supported the internal team on ERPNext.

Front-end Developer

Apr 2022 – July 2022

- Designed and built a custom React.js CMS on the Ant Design System for managing the content of the app and website.
- Built a static marketing page in HTML, CSS, and PHP with form handling and an ERPNext integration.

DevOps Engineer

Jan 2022 – Mar 2022

- Took ownership of AWS alongside project management to implement CI CD pipelines for the back-end using Docker, Jenkins, EC2, ECR, IAM, Route 53, and ACM, and hosted the website on AWS Amplify.
- Ran gitops on AWS EKS with ArgoCD, cert-manager, and Nginx Ingress Controllers, and evaluated AWS CodeDeploy and ECS.

Back-end Developer

Sept 2021 – Dec 2021

- Wrote RESTful APIs for the CMS of the app and website, implementing role and module permission based editing.
- Refactored a legacy Express.js + MongoDB codebase on AWS, introducing versioning and modularisation for better flexibility.

User Interface Designer

Oct 2020 – Aug 2021

- Solely prototyped and designed an MVP mobile app in the edu tech space using Figma.
- Worked alongside a newly formed team of developers and content writers to take the product from concept to a shipped MVP.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, PHP, C, Java, Lua, CSS, HTML

Databases Management: PostgreSQL (PostGIS), MongoDB, MySQL, Redis

Web Frameworks: Laravel, React.js, Next.js, Express.js, Nest.js, Inertia.js, Livewire, Tailwind CSS

Tools & Platforms: Filament, Laravel Forge, Stripe, Firebase (FCM), Google Workspace APIs, WordPress, Strapi, ERPNext

Cloud Services: AWS (EC2, CloudFront, S3, Amplify, Route 53, ECS, EKS, ECR)

Continuous Integration/Deployment: Jenkins, Docker

Design Tools: Figma, Adobe Photoshop, Adobe Illustrator, Blender

EDUCATION

TKM College of Engineering - CGPA 8.35

Bachelor of Technology - BTech, Computer Science

Kollam, Kerala, India

Aug 2017 – Nov 2021

Gurukulam Public School - CBSE 90%

High School Diploma (Computer Science Discipline)

Thrissur, Kerala, India

June 2014 - June 2016
